| 3      | Application for approval | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Functional     | No Relationship   | N/A                | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                        |       |
| 3.1    | Application for approval | The application for approval of a vehicle type with regard to cyber security shall be submitted by the vehicle manufacturer or by their duly accredited representative.                                                                                                                                                                                                                                                                                                                                                                                                                                          | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 3.2    | Application for approval | It shall be accompanied by the undermentioned documents in triplicate, and by the following particulars:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 3.2.1  | Application for approval | A description of the vehicle type with regard to the items specified in Annex 1 to this Regulation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 3.2.2  | Application for approval | In cases where information is shown to be covered by intellectual property rights or to constitute specific know-how of the manufacturer or of their suppliers, the manufacturer or their suppliers shall make available sufficient information to enable the checks referred to in this Regulation to be made properly. Such information shall be treated on a confidential basis.                                                                                                                                                                                                                              | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 3.2.3  | Application for approval | The Certificate of Compliance for CSMS according to paragraph 6 of this Regulation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 3.3    | Application for approval | Documentation shall be made available in two parts:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 3.3(a) | Application for approval | The formal documentation package for the approval, containing the material specified in Annex 1 which shall be supplied to the Approval Authority or its Technical Service at the time of submission of the type approval application. This documentation package shall be used by the Approval Authority or its Technical Service as the basic reference for the approval process. The Approval Authority or its Technical Service shall ensure that this documentation package remains available for at least 10 years counted from the time when production of the vehicle type is definitively discontinued. | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 3.3(b) | Application for approval | Additional material relevant to the requirements of this regulation may be retained by the manufacturer, but made open for inspection at the time of type approval. The manufacturer shall ensure that any material made open for inspection at the time of type approval remains available for at least a period of 10 years counted from the time when production of the vehicle type is definitively discontinued.                                                                                                                                                                                            | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 4      | Marking                  | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Functional     | No Relationship   | N/A                | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                        |       |
| 4.1    | Marking                  | There shall be affixed, conspicuously and in a readily accessible place specified on the approval form, to every vehicle conforming to a vehicle type approved under this Regulation an international approval mark consisting of:                                                                                                                                                                                                                                                                                                                                                                               | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 4.1.1  | Marking                  | A circle surrounding the Letter "E" followed by the distinguishing number of the country which has granted approval.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 4.1.2  | Marking                  | The number of this Regulation, followed by the letter "R", a dash and the approval number to the right of the circle described in paragraph 4.1.1. above.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 4.2    | Marking                  | If the vehicle conforms to a vehicle type approved under one or more other Regulations annexed to the Agreement in the country which has granted approval under this Regulation, the symbol prescribed in paragraph 4.1.1. above need not be repeated; in this case the Regulation and approval numbers and the additional symbols of all the Regulations under which approval has been granted in the country which has granted approval under this Regulation shall be placed in vertical columns to the right of the symbol prescribed in paragraph 4.1.1. above.                                             | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |

| 6.3.2      | Certificate of Compliance for Cyber Security Management System | A signed declaration using the model as defined in Appendix 1 to Annex 1.                                                                                                                                                                                                                                                                                                                                                                                                | Functional     | No Relationship   | N/A                                               | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                       | 0                        |       |
| 6.4        | Certificate of Compliance for Cyber Security Management System | In the context of the assessment, the manufacturer shall declare using the model as defined in Appendix 1 to Annex 1 and demonstrate to the satisfaction of the Approval Authority or its Technical Service that they have the necessary processes to comply with all the requirements for cyber security according to this Regulation.                                                                                                                                  | Functional     | No Relationship   | N/A                                               | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                       | 0                        |       |
| 6.5        | Certificate of Compliance for Cyber Security Management System | When this assessment has been satisfactorily completed and in receipt of a signed declaration from the manufacturer according to the model as defined in Appendix 1 to Annex 1, a certificate named Certificate of Compliance for CSMS as described in Annex 4 to this Regulation (hereinafter the Certificate of Compliance for CSMS) shall be granted to the manufacturer.                                                                                             | Functional     | No Relationship   | N/A                                               | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                       | 0                        |       |
| 6.6        | Certificate of Compliance for Cyber Security Management System | The Approval Authority or its Technical Service shall use the model set out in Annex 4 to this Regulation for the Certificate of Compliance for CSMS.                                                                                                                                                                                                                                                                                                                    | Functional     | No Relationship   | N/A                                               | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                       | 0                        |       |
| 6.7        | Certificate of Compliance for Cyber Security Management System | The Certificate of Compliance for CSMS shall remain valid for a maximum of three years from the date of deliverance of the certificate unless it is withdrawn.                                                                                                                                                                                                                                                                                                           | Functional     | No Relationship   | N/A                                               | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                       | 0                        |       |
| 6.8        | Certificate of Compliance for Cyber Security Management System | The Approval Authority which has granted the Certificate of Compliance for CSMS may at any time verify that the requirements for it continue to be met. The Approval Authority shall withdraw the Certificate of Compliance for CSMS if the requirements laid down in this Regulation are no longer met.                                                                                                                                                                 | Functional     | No Relationship   | N/A                                               | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                       | 0                        |       |
| 6.9        | Certificate of Compliance for Cyber Security Management System | The manufacturer shall inform the Approval Authority or its Technical Service of any change that will affect the relevance of the Certificate of Compliance for CSMS. After consultation with the manufacturer, the Approval Authority or its Technical Service shall decide whether new checks are necessary.                                                                                                                                                           | Functional     | No Relationship   | N/A                                               | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                       | 0                        |       |
| 6.10       | Certificate of Compliance for Cyber Security Management System | At the end of the period of validity of the Certificate of Compliance for CSMS, the Approval Authority shall, after a positive assessment, issue a new Certificate of Compliance for CSMS or extend its validity for a further period of three years. The Approval Authority shall issue a new certificate in cases where changes have been brought to the attention of the Approval Authority or its Technical Service and the changes have been positively reassessed. | Functional     | No Relationship   | N/A                                               | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                       | 0                        |       |
| 6.11       | Certificate of Compliance for Cyber Security Management System | The expiry or withdrawal of the manufacturer's Certificate of Compliance for CSMS shall be considered, with regard to the vehicle types to which the CSMS concerned was relevant, as modification of approval, as referred to in paragraph 8.                                                                                                                                                                                                                            | Functional     | No Relationship   | N/A                                               | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                       | 0                        |       |

| 7.2.2.2(e) | Specifications | The processes used for testing the cyber security of a vehicle type;                                                                                                                                                                                                                                                                                        | Functional     | Intersects With   | Assessment Boundaries                                            | IAO-01.1 | Mechanisms exist to establish the scope of assessments by defining the assessment boundary, according to people, processes and technology that directly or indirectly impact the confidentiality, integrity, availability and safety of the Technology Assets, Applications, Services and/or Data (TAASD) under review.                                                                                                    | 8                        |       |
| 7.2.2.2(e) | Specifications | The processes used for testing the cyber security of a vehicle type;                                                                                                                                                                                                                                                                                        | Functional     | Intersects With   | Assessments                                                      | IAO-02   | Mechanisms exist to formally assess the security, compliance and resilience controls in Technology Assets, Applications and/or Services (TAAS) through Information Assurance Program (IAP) activities to determine the extent to which the controls are implemented correctly, operating as intended and producing the desired outcome with respect to meeting expected requirements.                                      | 8                        |       |
| 7.2.2.2(f) | Specifications | The processes used for ensuring that the risk assessment is kept current;                                                                                                                                                                                                                                                                                   | Functional     | Subset Of         | Risk Assessment Methodology                                      | RSK-04.2 | Mechanisms exist to implement a risk assessment methodology to ensure coverage for organizational components relevant for secure, compliant and resilient operations.                                                                                                                                                                                                                                                      | 10                       |       |
| 7.2.2.2(f) | Specifications | The processes used for ensuring that the risk assessment is kept current;                                                                                                                                                                                                                                                                                   | Functional     | Intersects With   | Risk Assessment Update                                           | RSK-07   | Mechanisms exist to routinely update risk assessments and react accordingly upon identifying new security vulnerabilities, including using outside sources for security vulnerability information.                                                                                                                                                                                                                         | 8                        |       |
| 7.2.2.2(g) | Specifications | The processes used to monitor for, detect and respond to cyber-attacks, cyber threats and vulnerabilities on vehicle types and the processes used to assess whether the cyber security measures implemented are still effective in the light of new cyber threats and vulnerabilities that have been identified.                                            | Functional     | Intersects With   | Continuous Monitoring                                            | MON-01   | Mechanisms exist to facilitate the implementation of enterprise-wide monitoring controls.                                                                                                                                                                                                                                                                                                                                  | 8                        |       |
| 7.2.2.2(g) | Specifications | The processes used to monitor for, detect and respond to cyber-attacks, cyber threats and vulnerabilities on vehicle types and the processes used to assess whether the cyber security measures implemented are still effective in the light of new cyber threats and vulnerabilities that have been identified.                                            | Functional     | Intersects With   | Anomalous Behavior                                               | MON-16   | Mechanisms exist to utilize User & Entity Behavior Analytics (UEBA) and/or User Activity Monitoring (UAM) solutions to detect and respond to anomalous behavior that could indicate account compromise or other malicious activities.                                                                                                                                                                                      | 8                        |       |
| 7.2.2.2(g) | Specifications | The processes used to monitor for, detect and respond to cyber-attacks, cyber threats and vulnerabilities on vehicle types and the processes used to assess whether the cyber security measures implemented are still effective in the light of new cyber threats and vulnerabilities that have been identified.                                            | Functional     | Intersects With   | Threat Intelligence Program                                      | THR-01   | Mechanisms exist to implement a threat intelligence program that includes a cross-organization information-sharing capability that can influence the development of the system and security architectures, selection of security solutions, monitoring, threat hunting, response and recovery activities.                                                                                                                  | 8                        |       |
| 7.2.2.2(g) | Specifications | The processes used to monitor for, detect and respond to cyber-attacks, cyber threats and vulnerabilities on vehicle types and the processes used to assess whether the cyber security measures implemented are still effective in the light of new cyber threats and vulnerabilities that have been identified.                                            | Functional     | Intersects With   | Threat Intelligence Feeds                                        | THR-03   | Mechanisms exist to maintain situational awareness of vulnerabilities and evolving threats by leveraging the knowledge of attacker tactics, techniques and procedures to facilitate the implementation of preventative and compensating controls.                                                                                                                                                                          | 8                        |       |
| 7.2.2.2(g) | Specifications | The processes used to monitor for, detect and respond to cyber-attacks, cyber threats and vulnerabilities on vehicle types and the processes used to assess whether the cyber security measures implemented are still effective in the light of new cyber threats and vulnerabilities that have been identified.                                            | Functional     | Intersects With   | Threat Analysis                                                  | THR-10   | Mechanisms exist to identify, assess, prioritize and document the potential impact(s) and likelihood(s) of applicable internal and external threats.                                                                                                                                                                                                                                                                       | 5                        |       |
| 7.2.2.2(g) | Specifications | The processes used to monitor for, detect and respond to cyber-attacks, cyber threats and vulnerabilities on vehicle types and the processes used to assess whether the cyber security measures implemented are still effective in the light of new cyber threats and vulnerabilities that have been identified.                                            | Functional     | Intersects With   | Vulnerability & Patch Management Program (VPMP)                  | VPM-01   | Mechanisms exist to facilitate the implementation and monitoring of vulnerability management controls.                                                                                                                                                                                                                                                                                                                     | 8                        |       |
| 7.2.2.2(g) | Specifications | The processes used to monitor for, detect and respond to cyber-attacks, cyber threats and vulnerabilities on vehicle types and the processes used to assess whether the cyber security measures implemented are still effective in the light of new cyber threats and vulnerabilities that have been identified.                                            | Functional     | Intersects With   | Continuous Vulnerability Remediation Activities                  | VPM-04   | Mechanisms exist to address new threats and vulnerabilities on an ongoing basis and ensure assets are protected against known attacks.                                                                                                                                                                                                                                                                                     | 8                        |       |
| 7.2.2.2(h) | Specifications | The processes used to provide relevant data to support analysis of attempted or successful cyber-attacks.                                                                                                                                                                                                                                                   | Functional     | Intersects With   | Continuous Monitoring                                            | MON-01   | Mechanisms exist to facilitate the implementation of enterprise-wide monitoring controls.                                                                                                                                                                                                                                                                                                                                  | 8                        |       |
| 7.2.2.2(h) | Specifications | The processes used to provide relevant data to support analysis of attempted or successful cyber-attacks.                                                                                                                                                                                                                                                   | Functional     | Intersects With   | Monitoring for Indicators of Compromise (IOC)                    | MON-11.3 | Automated mechanisms exist to identify and alert on Indicators of Compromise (IoC).                                                                                                                                                                                                                                                                                                                                        | 8                        |       |
| 7.2.2.2(h) | Specifications | The processes used to provide relevant data to support analysis of attempted or successful cyber-attacks.                                                                                                                                                                                                                                                   | Functional     | Intersects With   | Indicators of Compromise (IOC)                                   | IRO-03   | Mechanisms exist to define specific Indicators of Compromise (IOC) to identify the signs of potential cybersecurity events.                                                                                                                                                                                                                                                                                                | 8                        |       |
| 7.2.2.2(h) | Specifications | The processes used to provide relevant data to support analysis of attempted or successful cyber-attacks.                                                                                                                                                                                                                                                   | Functional     | Intersects With   | Threat Intelligence Feeds                                        | THR-03   | Mechanisms exist to maintain situational awareness of vulnerabilities and evolving threats by leveraging the knowledge of attacker tactics, techniques and procedures to facilitate the implementation of preventative and compensating controls.                                                                                                                                                                          | 8                        |       |
| 7.2.2.3    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that, based on categorization referred to in paragraph 7.2.2.2 (c) and 7.2.2.2 (g), cyber threats and vulnerabilities which require a response from the vehicle manufacturer shall be mitigated within a reasonable timeframe. | Functional     | Intersects With   | Risk Remediation                                                 | RSK-06   | Mechanisms exist to remediate risks to an acceptable level.                                                                                                                                                                                                                                                                                                                                                                | 8                        |       |
| 7.2.2.3    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that, based on categorization referred to in paragraph 7.2.2.2 (c) and 7.2.2.2 (g), cyber threats and vulnerabilities which require a response from the vehicle manufacturer shall be mitigated within a reasonable timeframe. | Functional     | Intersects With   | Risk Response                                                    | RSK-06.1 | Mechanisms exist to ensure proper risk response actions were performed to remediate findings from security, compliance and/or resilience-related:<br>(1) Assessments;<br>(2) Audits; and/or<br>(3) Incidents.                                                                                                                                                                                                              | 8                        |       |
| 7.2.2.3    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that, based on categorization referred to in paragraph 7.2.2.2 (c) and 7.2.2.2 (g), cyber threats and vulnerabilities which require a response from the vehicle manufacturer shall be mitigated within a reasonable timeframe. | Functional     | Intersects With   | Compensating Countermeasures                                     | RSK-06.2 | Mechanisms exist to identify and implement compensating countermeasures to reduce risk and exposure to threats.                                                                                                                                                                                                                                                                                                            | 3                        |       |
| 7.2.2.3    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that, based on categorization referred to in paragraph 7.2.2.2 (c) and 7.2.2.2 (g), cyber threats and vulnerabilities which require a response from the vehicle manufacturer shall be mitigated within a reasonable timeframe. | Functional     | Intersects With   | Risk Treatment Options                                           | RSK-06.3 | Mechanisms exist to select appropriate risk treatment options, based on applicable risk assessment findings, including:<br>(1) Mitigating the risk to an acceptable level;<br>(2) Avoiding the risk (e.g., terminating the project);<br>(3) Transferring the risk to a third party (e.g., insurance, service provider, etc.); or<br>(4) Accepting the risk.                                                                | 8                        |       |
| 7.2.2.3    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that, based on categorization referred to in paragraph 7.2.2.2 (c) and 7.2.2.2 (g), cyber threats and vulnerabilities which require a response from the vehicle manufacturer shall be mitigated within a reasonable timeframe. | Functional     | Intersects With   | Risk Treatment Plan (RTP)                                        | RSK-06.4 | Mechanisms exist to formalize a Risk Treatment Plan (RTP) that applicable stakeholders will utilize to remediate identified risks according to a defined timeline.                                                                                                                                                                                                                                                         | 5                        |       |
| 7.2.2.3    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that, based on categorization referred to in paragraph 7.2.2.2 (c) and 7.2.2.2 (g), cyber threats and vulnerabilities which require a response from the vehicle manufacturer shall be mitigated within a reasonable timeframe. | Functional     | Intersects With   | Security, Compliance & Resilience Testing Throughout Development | TDA-09   | Mechanisms exist to require system developers/integrators consult with security, compliance and/or resilience personnel to:<br>(1) Create and implement a Security Testing and Evaluation (ST&E) plan, or similar capability;<br>(2) Implement a verifiable flaw remediation process to correct weaknesses and deficiencies identified during the control testing and evaluation process; and<br>(3) Document the results. | 8                        |       |

| FDE #      | FDE Name       | Focal Document Element (FDE) Description                                                                                                                                                                                                                                                                                                                    | STRM Rationale | STRM Relationship | SCF Control                                                      | SCF #    | Secure Controls Framework (SCF) Control Description                                                                                                                                                                                                                                                                                                                                                                                                                | Strength of Relationship | Notes |

| 7.2.2.3    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that, based on categorization referred to in paragraph 7.2.2.2 (c) and 7.2.2.2 (g), cyber threats and vulnerabilities which require a response from the vehicle manufacturer shall be mitigated within a reasonable timeframe. | Functional     | Intersects With   | Continuous Monitoring Plan                                       | TDA-09.1 | Mechanisms exist to require the developers of Technology Assets, Applications and/or Services (TAAS) to produce a plan for the continuous monitoring of security, compliance and/or resilience control effectiveness.                                                                                                                                                                                                                                              | 3                        |       |
| 7.2.2.3    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that, based on categorization referred to in paragraph 7.2.2.2 (c) and 7.2.2.2 (g), cyber threats and vulnerabilities which require a response from the vehicle manufacturer shall be mitigated within a reasonable timeframe. | Functional     | Intersects With   | Developer Threat Analysis & Flaw Remediation                     | TDA-15   | Mechanisms exist to require system developers and integrators to develop and implement an ongoing Security Testing and Evaluation (ST&E) plan, or similar process, to objectively identify and remediate vulnerabilities prior to release to production.                                                                                                                                                                                                           | 8                        |       |
| 7.2.2.4    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that the monitoring referred to in paragraph 7.2.2.2 (g) shall be continual. This shall:                                                                                                                                       | Functional     | Subset Of         | Security, Compliance & Resilience Testing Throughout Development | TDA-09   | Mechanisms exist to require system developers/integrators consult with security, compliance and/or resilience personnel to:<br>(1) Create and implement a Security Testing and Evaluation (ST&E) plan, or similar capability;<br>(2) Implement a verifiable flaw remediation process to correct weaknesses and deficiencies identified during the control testing and evaluation process; and<br>(3) Document the results.                                         | 10                       |       |
| 7.2.2.4    | Specifications | The vehicle manufacturer shall demonstrate that the processes used within their Cyber Security Management System will ensure that the monitoring referred to in paragraph 7.2.2.2 (g) shall be continual. This shall:                                                                                                                                       | Functional     | Intersects With   | Continuous Monitoring Plan                                       | TDA-09.1 | Mechanisms exist to require the developers of Technology Assets, Applications and/or Services (TAAS) to produce a plan for the continuous monitoring of security, compliance and/or resilience control effectiveness.                                                                                                                                                                                                                                              | 8                        |       |
| 7.2.2.4(a) | Specifications | Include vehicles after first registration in the monitoring;                                                                                                                                                                                                                                                                                                | Functional     | Intersects With   | Continuous Monitoring Plan                                       | TDA-09.1 | Mechanisms exist to require the developers of Technology Assets, Applications and/or Services (TAAS) to produce a plan for the continuous monitoring of security, compliance and/or resilience control effectiveness.                                                                                                                                                                                                                                              | 8                        |       |
| 7.2.2.4(b) | Specifications | Include the capability to analyse and detect cyber threats, vulnerabilities and cyber-attacks from vehicle data and vehicle logs. This capability shall respect paragraph 1.3. and the privacy rights of car owners or drivers, particularly with respect to consent.                                                                                       | Functional     | Intersects With   | Continuous Monitoring Plan                                       | TDA-09.1 | Mechanisms exist to require the developers of Technology Assets, Applications and/or Services (TAAS) to produce a plan for the continuous monitoring of security, compliance and/or resilience control effectiveness.                                                                                                                                                                                                                                              | 8                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Information Assurance (IA) Operations                            | IAO-01   | Mechanisms exist to facilitate the implementation of security, compliance and resilience assessment and authorization controls.                                                                                                                                                                                                                                                                                                                                    | 8                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Security, Compliance & Resilience In Project Management          | PRM-04   | Mechanisms exist to assess security, compliance and resilience controls as part of Technology Assets, Applications and/or Services (TAAS) project development to determine whether controls are implemented correctly, operating as intended and producing the desired outcome with respect to meeting requirements.                                                                                                                                               | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Security, Compliance & Resilience Requirements Definition        | PRM-05   | Mechanisms exist to proactively govern Technology Assets, Applications and/or Services (TAAS) by:<br>(1) Defining technical security, compliance and resilience requirements; and<br>(2) Performing a criticality analysis at predefined decision points in the project lifecycle.                                                                                                                                                                                 | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Secure Development Life Cycle (SDLC) Management                  | PRM-07   | Mechanisms exist to ensure changes to Technology Assets, Applications and/or Services (TAAS) within the Secure Development Life Cycle (SDLC) are controlled through formal change control procedures.                                                                                                                                                                                                                                                              | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Supply Chain Risk Management (SCRM) Plan                         | RSK-09   | Mechanisms exist to develop a plan for Supply Chain Risk Management (SCRM) associated with the development, acquisition, maintenance and disposal of Technology Assets, Applications and/or Services (TAAS), including documenting selected mitigating actions and monitoring performance against those plans.                                                                                                                                                     | 8                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Supply Chain Risk Assessment                                     | RSK-09.1 | Mechanisms exist to periodically assess supply chain risks associated with Technology Assets, Applications and/or Services (TAAS).                                                                                                                                                                                                                                                                                                                                 | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Product Management                                               | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 8                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Minimum Viable Product (MVP) Security Requirements               | TDA-02   | Mechanisms exist to design, develop and produce Technology Assets, Applications and/or Services (TAAS) in such a way that risk-based technical and functional specifications ensure Minimum Viable Product (MVP) criteria establish an appropriate level of security and resiliency based on applicable risks and threats.                                                                                                                                         | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Subset Of         | Third-Party Management                                           | TPM-01   | Mechanisms exist to facilitate the implementation of third-party management controls.                                                                                                                                                                                                                                                                                                                                                                              | 10                       |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Third-Party Inventories                                          | TPM-01.1 | Mechanisms exist to maintain a current, accurate and complete list of External Service Providers (ESPs) that can potentially impact the Confidentiality, Integrity, Availability and/or Safety (CIAS) of the organization's Technology Assets, Applications, Services and/or Data (TAASD).                                                                                                                                                                         | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Third-Party Criticality Assessments                              | TPM-02   | Mechanisms exist to identify, prioritize and assess suppliers and partners of critical Technology Assets, Applications and/or Services (TAAS) using a supply chain risk assessment process relative to their importance in supporting the delivery of high-value services.                                                                                                                                                                                         | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Supply Chain Risk Management (SCRM)                              | TPM-03   | Mechanisms exist to:<br>(1) Evaluate security risks and threats associated with Technology Assets, Applications and/or Services (TAAS) supply chains; and<br>(2) Take appropriate remediation actions to minimize the organization's exposure to those risks and threats, as necessary.                                                                                                                                                                            | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Acquisition Strategies, Tools & Methods                          | TPM-03.1 | Mechanisms exist to utilize tailored acquisition strategies, contract tools and procurement methods for the purchase of unique Technology Assets, Applications and/or Services (TAAS).                                                                                                                                                                                                                                                                             | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Limit Potential Harm                                             | TPM-03.2 | Mechanisms exist to utilize security safeguards to limit harm from potential adversaries who identify and target the organization's supply chain.                                                                                                                                                                                                                                                                                                                  | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Processes To Address Weaknesses or Deficiencies                  | TPM-03.3 | Mechanisms exist to address identified weaknesses or deficiencies in the security of the supply chain                                                                                                                                                                                                                                                                                                                                                              | 5                        |       |
| 7.2.2.5    | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                          | Functional     | Intersects With   | Third-Party Services                                             | TPM-04   | Mechanisms exist to mitigate the risks associated with third-party access to the organization's Technology Assets, Applications, Services and/or Data (TAASD).                                                                                                                                                                                                                                                                                                     | 5                        |       |

| 7.2.2.5 | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Functional     | Intersects With   | Third-Party Risk Assessments & Approvals                                  | TPM-04.1 | Mechanisms exist to conduct a risk assessment prior to the acquisition or outsourcing of technology-related Technology Assets, Applications and/or Services (TAAS).                                                                                                                                                                                                                                                                                                | 5                        |       |
| 7.2.2.5 | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Functional     | Intersects With   | Third-Party Contract Requirements                                         | TPM-05   | Mechanisms exist to require contractual requirements for applicable security, compliance and resilience requirements with third-parties, reflecting the organization's needs to protect its Technology Assets, Applications, Services and/or Data (TAASD).                                                                                                                                                                                                         | 5                        |       |
| 7.2.2.5 | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Functional     | Intersects With   | Contract Flow-Down Requirements                                           | TPM-05.2 | Mechanisms exist to ensure applicable security, compliance and resilience requirements are included in contracts that flow-down to applicable sub-contractors and suppliers.                                                                                                                                                                                                                                                                                       | 5                        |       |
| 7.2.2.5 | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Functional     | Intersects With   | Responsible, Accountable, Supportive, Consulted & Informed (RASCI) Matrix | TPM-05.4 | Mechanisms exist to document and maintain a Responsible, Accountable, Supportive, Consulted & Informed (RASCI) matrix, or similar documentation, to delineate assignment for security, compliance and resilience controls between internal stakeholders and External Service Providers (ESPs).                                                                                                                                                                     | 5                        |       |
| 7.2.2.5 | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Functional     | Intersects With   | First-Party Declaration (1PD)                                             | TPM-05.6 | Mechanisms exist to obtain a First-Party Declaration (1PD) from applicable External Service Providers (ESPs) that provides assurance of compliance with specified statutory, regulatory and contractual obligations for security, compliance and resilience controls, including any flow-down requirements to subcontractors.                                                                                                                                      | 5                        |       |
| 7.2.2.5 | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Functional     | Intersects With   | Break Clauses                                                             | TPM-05.7 | Mechanisms exist to include "break clauses" within contracts for failure to meet contract criteria for security, compliance and/or resilience controls.                                                                                                                                                                                                                                                                                                            | 5                        |       |
| 7.2.2.5 | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Functional     | Intersects With   | Third-Party Personnel Security                                            | TPM-06   | Mechanisms exist to control personnel security requirements including security roles and responsibilities for third-party providers.                                                                                                                                                                                                                                                                                                                               | 5                        |       |
| 7.2.2.5 | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Functional     | Intersects With   | Review of Third-Party Services                                            | TPM-08   | Mechanisms exist to monitor, regularly review and assess External Service Providers (ESPs) for compliance with established contractual requirements for security, compliance and resilience controls.                                                                                                                                                                                                                                                              | 5                        |       |
| 7.2.2.5 | Specifications | The vehicle manufacturer shall be required to demonstrate how their Cyber Security Management System will manage dependencies that may exist with contracted suppliers, service providers or manufacturer's sub-organizations in regards of the requirements of paragraph 7.2.2.2.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Functional     | Intersects With   | Third-Party Deficiency Remediation                                        | TPM-09   | Mechanisms exist to address weaknesses or deficiencies in supply chain elements identified during independent or organizational assessments of such elements.                                                                                                                                                                                                                                                                                                      | 5                        |       |
| 7.3     | Specifications | Requirements for vehicle types                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Functional     | No Relationship   | N/A                                                                       | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                        |       |
| 7.3.1   | Specifications | The manufacturer shall have a valid Certificate of Compliance for the Cyber Security Management System relevant to the vehicle type being approved. However, for type approvals prior to 1 July 2024, if the vehicle manufacturer can demonstrate that the vehicle type could not be developed in compliance with the CSMS, then the vehicle manufacturer shall demonstrate that cyber security was adequately considered during the development phase of the vehicle type concerned.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Functional     | Subset Of         | Product Management                                                        | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 7.3.2   | Specifications | The vehicle manufacturer shall identify and manage, for the vehicle type being approved, supplier-related risks.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Functional     | Subset Of         | Product Management                                                        | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 7.3.3   | Specifications | The vehicle manufacturer shall identify the critical elements of the vehicle type and perform an exhaustive risk assessment for the vehicle type and shall treat/manage the identified risks appropriately. The risk assessment shall consider the individual elements of the vehicle type and their interactions. The risk assessment shall further consider interactions with any external systems. While assessing the risks, the vehicle manufacturer shall consider the risks related to all the threats referred to in Annex 5, Part A, as well as any other relevant risk.                                                                                                                                                                                                                                                                                                                                                            | Functional     | Subset Of         | Product Management                                                        | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 7.3.4   | Specifications | The vehicle manufacturer shall protect the vehicle type against risks identified in the vehicle manufacturer's risk assessment. Proportionate mitigations shall be implemented to protect the vehicle type. The mitigations implemented shall include all mitigations referred to in Annex 5, Part B and C which are relevant for the risks identified. However, if a mitigation referred to in Annex 5, Part B or C, is not relevant or not sufficient for the risk identified, the vehicle manufacturer shall ensure that another appropriate mitigation is implemented. In particular, for type approvals prior to 1 July 2024, the vehicle manufacturer shall ensure that another appropriate mitigation is implemented if a mitigation measure referred to in Annex 5, Part B or C is technically not feasible. The respective assessment of the technical feasibility shall be provided by the manufacturer to the approval authority. | Functional     | Subset Of         | Product Management                                                        | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 7.3.5   | Specifications | The vehicle manufacturer shall put in place appropriate and proportionate measures to secure dedicated environments on the vehicle type (if provided) for the storage and execution of aftermarket software, services, applications or data.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Functional     | Subset Of         | Product Management                                                        | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 7.3.6   | Specifications | The vehicle manufacturer shall perform, prior to type approval, appropriate and sufficient testing to verify the effectiveness of the security measures implemented.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Functional     | Subset Of         | Product Management                                                        | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 7.3.7   | Specifications | The vehicle manufacturer shall implement measures for the vehicle type to:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Functional     | Subset Of         | Product Management                                                        | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |

| 8.1      | Modification and extension of the vehicle type | Every modification of the vehicle type which affects its technical performance with respect to cybersecurity and/or documentation required in this Regulation shall be notified to the approval authority which approved the vehicle type. The Approval Authority may then either:                                                                                                                                                                                                                                                    | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 8.1.1    | Modification and extension of the vehicle type | Consider that the modifications made still comply with the requirements and documentation of existing type approval; or                                                                                                                                                                                                                                                                                                                                                                                                               | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 8.1.2    | Modification and extension of the vehicle type | Require a further test report from the Technical Service responsible for conducting the tests.                                                                                                                                                                                                                                                                                                                                                                                                                                        | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 8.1.3    | Modification and extension of the vehicle type | Confirmation or extension or refusal of approval, specifying the alterations, shall be communicated by means of a communication form conforming to the model in Annex 2 to this Regulation. The Approval Authority issuing the extension of approval shall assign a series number for such an extension and inform there of the other Parties to the 1958 Agreement applying this Regulation by means of a communication form conforming to the model in Annex 2 to this Regulation.                                                  | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 9        | Conformity of production                       | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Functional     | No Relationship   | N/A                | N/A      | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 0                        |       |
| 9.1      | Conformity of production                       | The Conformity of Production Procedures shall comply with those set out in the 1958 Agreement, Schedule 1 (E/CE/TRANS/505/Rev.3) with the following requirements:                                                                                                                                                                                                                                                                                                                                                                     | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
| 9.1.1    | Conformity of production                       | The holder of the approval shall ensure that results of the conformity of production tests are recorded and that the annex documents remain available for a period determined in agreement with the Approval Authority or its Technical Service. This period shall not exceed 10 years counted from the time when production is definitively discontinued;                                                                                                                                                                            | Functional     | Subset Of         | Product Management | TDA-01.1 | Mechanisms exist to design and implement product management processes to proactively govern the design, development and production of Technology Assets, Applications and/or Services (TAAS) across the System Development Life Cycle (SDLC) to:<br>(1) Improve functionality;<br>(2) Enhance security and resiliency capabilities;<br>(3) Correct security deficiencies; and<br>(4) Conform with applicable statutory, regulatory and/or contractual obligations. | 10                       |       |
